Product Description

Rhino Ag GS60 5' Grading Scraper Blade, w/ Scarifier Shanks

The Rhino grading scraper cuts material from high spots and deposits it in the low spots, leveling the surface. Available in widths of 60", 72", and 84", this scraper will fit your needs with a minimum number of passes over the surface.

Designed for economical use, the grading scraper only requires 30-50 HP, depending on the model. Additionally, heat-treated shanks with replaceable hardened tips that can rip down 2-3/8" are standard on every Rhino Grading Scraper!

The offset angled blades use 1/2" x 6" cutting edges that are reversible and replaceable for long life, and the 13-3/4" tall side panels allow for large volume movement of loose material. Full-length replaceable wear skids are standard for long life in tough conditions!
